

## Oseis™

Project Management Software

### System Description

The **Orica Oseis™** Project Management Software is a unique project management system that works in conjunction with the Oseis™ electronic initiating system. The software allows for continuous tracking of the project hole status from point of survey to point of initiation. Data can be exported in .csv format to be imported into survey databases or other data management programs. Data can be managed/viewed over multiple stations through its built in sync system, and can be sent by an intranet, network or email connection.

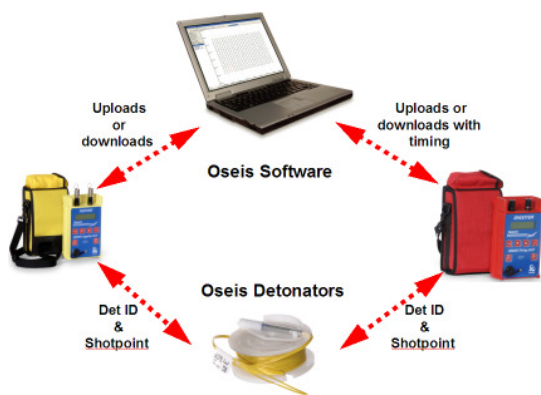

### Key Benefits

The **Orica Oseis™** Project Management Software provides

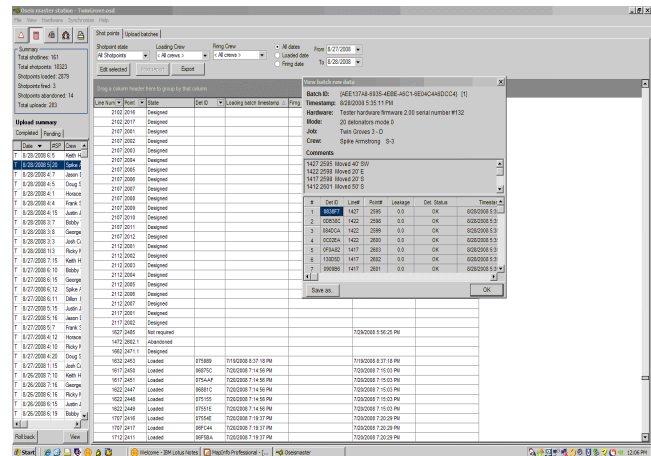

- A complete quality management system for explosive shothole loading and firing
- Security over explosives integrity and inventory
- Productivity improvements through the ability to track driller and shooter performance through Tester II and Shooter II timestamps
- Instant trouble shooting/ problem solving through real time communication and data transfer
- Ability to transfer relative data to survey, drill, acquisition and client company for use in intercompany data management systems

### Oseis™ Project Management Database

The **Oseis™** Project Management Software system generates its data through the communication of the Tester and Shooter with the Oseis™ Detonator.

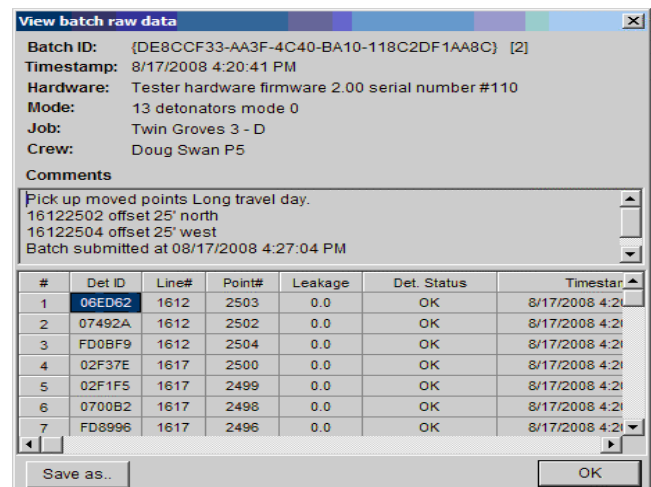

The database captures the Shotpoint and Line number along with the Oseis™ Detonator ID and the status of the detonator at the time of testing; utilizing the Tester II, timestamps will also be captured. Data is downloaded into the software to create a drill log.

### Oseis™ Project Management Drill Log

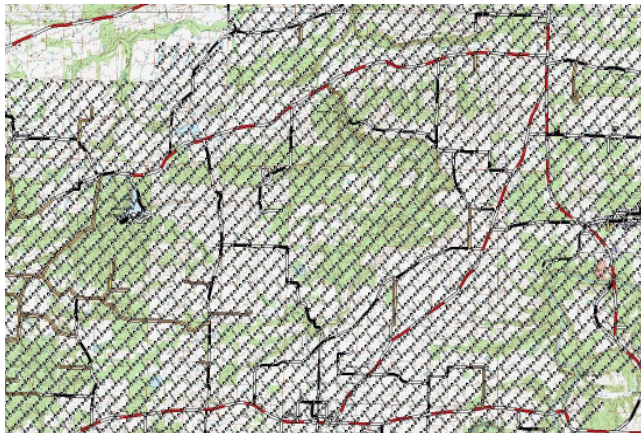

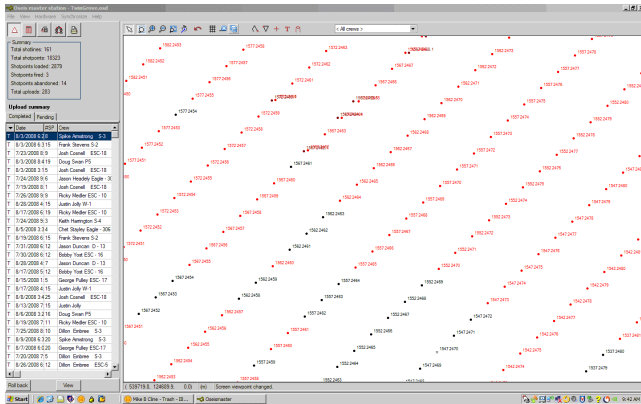

The Drill Log captures the following information: driller/drill ID, date of download, project ID, # of detonators downloaded, det ID's, shotpoints, line numbers, line leakage, det status (OK/Failed), timestamp and a comments section.

### Oseis™ Project Management Graphics

The Oseis™ Project Management graphics options allow you to view or print your data depending on your preference. You can view/print your data in a shotpoint file or as a topo. The program allows printing or plotting to any installed printer/plotter on your system, including network printing.

## Oseis™ Project Management Software

### Oseis™ Project Management Exports

Your data can be exported for use in other data management systems. With the .csv file extension you can export your data for use by other data management systems. A few of the uses are; survey file updating, client data project management programs, bird dog daily reports, post project performance reporting, etc.
